## **Adsorption, Ion Exchange and Catalysis: Design of Operations and Environmental Applications**

Stavros G. Poulopoulos, Vassilis J. Inglezakis

**Adsorption, Ion Exchange and Catalysis** is essentially a mixture of environmental science and chemical reactor engineering. More specifically, three important heterogeneous processes, namely, adsorption, ion exchange and catalysis, are analysed, from fundamental kinetics to reactor design with emphasis on their environmental applications. In Chapter 1, the subject of air and water pollution is dealt with. Data about pollutants and emission sources are given and the treatment methods are shortly presented. In Chapter 2, the very basics and historical development of adsorption, ion exchange and catalysis are presented as well as their environmental applications. Chapter 3 is devoted to heterogeneous processes and reactor analysis. All types of reactors are described in depth and reactor modelling, hydraulics and mass/heat transfer phenomena are examined for each type of reactor. Chapters 4 and 5 are dedicated to adsorption & ion exchange and catalysis, respectively. The basic principles are presented including kinetics, equilibrium, mass/heat transfer phenomena as well as the analytical solutions of the reactor models presented in Chapter 3. In the sixth chapter, the subject of scale up is approached.

The two Annexes at the end of the book contain physical properties of substances of environmental interest as well as unit conversion tables. Finally, nearly all the examples contained are based on real experimental data found in literature with environmental interest. Most of the examples consider all aspects of operation design – kinetics, hydraulics and mass transfer.

\* Provides basic knowledge of major environmental problems and connects them to chemical engineering

**From reader reviews:**

**Maurice Miller:**

This Adsorption, Ion Exchange and Catalysis: Design of Operations and Environmental Applications usually are reliable for you who want to be a successful person, why. The reason why of this Adsorption, Ion Exchange and Catalysis: Design of Operations and Environmental Applications can be on the list of great books you must have will be giving you more than just simple reading food but feed you actually with information that probably will shock your preceding knowledge. This book is actually handy, you can bring it all over the place and whenever your conditions in the e-book and printed people. Beside that this Adsorption, Ion Exchange and Catalysis: Design of Operations and Environmental Applications giving you an enormous of experience such as rich vocabulary, giving you demo of critical thinking that we all know it useful in your day task. So , let's have it appreciate reading.

**Melissa Sands:**

Spent a free time for you to be fun activity to complete! A lot of people spent their down time with their family, or their particular friends. Usually they carrying out activity like watching television, planning to beach, or picnic from the park. They actually doing same thing every week. Do you feel it? Do you need to something different to fill your own free time/ holiday? Could possibly be reading a book can be option to fill your free of charge time/ holiday. The first thing you will ask may be what kinds of publication that you should read. If you want to try look for book, may be the reserve untitled Adsorption, Ion Exchange and Catalysis: Design of Operations and Environmental Applications can be excellent book to read. May be it may be best activity to you.

**James Rutledge:**

Playing with family in a very park, coming to see the water world or hanging out with buddies is thing that usually you could have done when you have spare time, and then why you don't try point that really opposite from that. One particular activity that make you not sensation tired but still relaxing, trilling like on roller coaster you already been ride on and with addition info. Even you love Adsorption, Ion Exchange and Catalysis: Design of Operations and Environmental Applications, you can enjoy both. It is fine combination right, you still desire to miss it? What kind of hangout type is it? Oh can occur its mind hangout men. What? Still don't understand it, oh come on its called reading friends.

**David Blackwood:**

As a scholar exactly feel bored to help reading. If their teacher asked them to go to the library or even make summary for some reserve, they are complained. Just very little students that has reading's spirit or real their interest. They just do what the professor want, like asked to go to the library. They go to at this time there but nothing reading critically. Any students feel that studying is not important, boring along with can't see colorful photos on there. Yeah, it is being complicated. Book is very important for you personally. As we

know that on this era, many ways to get whatever we really wish for. Likewise word says, ways to reach Chinese's country. So , this Adsorption, Ion Exchange and Catalysis: Design of Operations and Environmental Applications can make you feel more interested to read.
