Experimental Therapeutics (Postgraduate Medical Science) MARTIN R WILKINS

The development and use of new medicines remains a formidable challenge. It now costs an average of \$800 million to bring a drug to market, more than twice as much as in 1987. Much of this money (perhaps up to 70%) is spent on drugs that fail on the path to licensing. To minimize costs, companies need to catch potential failures, due either to lack of clinical effect or toxicity, in the early discovery phase, long before they reach patients. Written for clinicians and scientists with an active interest in experimental medicine, *Experimental Therapeutics* introduces this dynamic and competitive discipline. It is a useful primer for anyone with a novel idea for pharmacological management of a disease.
