Human Cell Culture, Volume III: Cancer Cell Lines, Part 3: Leukemias and Lymphomas

Human Cell Culture, Volume III: Cancer Cell Lines, Part 3: Leukemias and Lymphomas

This book describes all human leukemia-lymphoma cell lines that have been established and that grow continuously under standardised *in vitro* conditions. These lines are derived from cells belonging to all the major hematopoietic cell lineages, i.e. B- and T-lymphocytes, natural killer cells, granulocytic cells and megakaryocytic cells. The clinical data, the culture conditions and the major phenotypic features of the cell lines are described with citations. This book is the first book describing human leukemia-lymphoma cell lines and will be of interest to scientists involved in the areas of hematology, oncology, immunology, molecular biology and cytogenetics.

Cancer Cell Lines, Volumes 1-3: These 3 volumes provide a comprehensive text on the culture of established cell lines from every type of human cancer. The volumes provide a basic manual and reference resource for every cancer research scientist using human cancer cells.
