Interferons documents the proceedings of a major international conference on Chemistry and Biology of Interferons: Relationship to Therapeutics held at Squaw Valley, California, in March 1982. The meeting was one of the 1982 UCLA Symposia on Molecular and Cellular Biology organized through the Molecular Biology Institute of the University of California at Los Angeles.

The book is organized into four parts. Part I presents papers on recombinant DNA production of interferon. It includes studies on the synthesis of human immune interferon in *E. coli* and monkey cells; the expression of human  $\beta$  interferon gene in heterologous cells; and the molecular activities of recombinant and hybrid leukocyte interferons. Part II deals with the biology of interferons, covering topics such as interferon production control process; the effect of interferon on cellular enzymes; and human amniotic interferon. Part III examines the factors relevant to clinical application of interferons, including structure-function studies with human interferon-gamma and on human alpha interferon. Part IV presents clinical studies of interferon, such as interferon  $\alpha$  trials in human tumor diseases and interferon in renal transplant recipients.
