**In Search of an Integrative Vision for Technology (Contemporary Systems Thinking)** Sytse Strijbos, Andrew Basden

In Search Of An Integrative Vision For Technology will stimulate its readers to consider the 'whole story that is information systems' within the context of an integrative vision of technology. It integrates disparate areas of debate and research while appreciating the contribution that philosophy can make to such thinking. It is deliberately broad in coverage, and designed to provide useful pointers so that researchers, students, practitioners, and developers can easily apply each point as needed. 'Human issues of technology and their normative aspects' is a theme that runs throughout the entire book. The integrative vision is centered on an understanding of human practice — the twin notions of structure and direction, and the leading and the founding functions of such practice. While this understanding applies to all technologies, it is worked out in more detail for information technology. From this philosophical understanding, many interdisciplinary areas of interest are identified.
